

Citizen Science Portal

On this website portal you can help reconnect European rivers by doing various activities like:

- View the map with tracked barriers
- Learn about barriers and their impacts
- Locate potential barriers in your area

www.amber.international/citizenscience

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 689682.

**Do you want to
help European
rivers?**

Working together to improve European Rivers

European Rivers are in need of your help. Tens of thousands of man-made barriers like dams or weirs are blocking them. Recording barriers with the Barrier Tracker app is vital to map all barriers and build the first ever European Barrier Atlas.

Join the Citizen Science project "Let It Flow" and reconnect rivers the smart way!

The Barrier Tracker

The Barrier Tracker is a free smartphone application that everybody can install to record the barriers that you find while hiking, fishing, kayaking and more.

European Barrier Atlas

All the barriers that you track with the app will be checked and verified before being used to complete a European map of river barriers. The European Barrier Atlas will be a key tool to prioritize barriers for improvement or removal. You can help.
